Intecolor 8031
Unretouched photo of screen.

Two very sophisticated desk top computers with two very unsophisticated price tags.

We're Intelligent Systems Corporation and we've developed two brand-new stand-alone desk top systems. Both are capable of handling an incredibly diverse range of business, control, research and financial applications—in color. Both have a better price/performance ratio than any other compact computer system on the market.

Take a look at the Intecolor 8031. A compact 13-inch 8-color CRT, it comes complete with graphics hardware and software, a built-in mini disk drive for extra storage, plus "File Handling BASIC" which lets you create, delete, and retrieve program segments from storage, by name.

Now take a look at the Intecolor 8051. Perfect if your needs call for a large-screen format. It comes with the same standard features as the 8031, but it has a big 19-inch diagonal screen and external mini disk drive.

We also have a variety of options available for both units. including a convenient bi-directional desk top printer and a new 2708/2716 PROM programmer.

Now you have a choice between two highly versatile, sophisticated and dependable desk top systems, so call us today with your order. Prices are based on a one unit, cash-with-order basis. Guaranteed 30-day delivery or your money back.
